- Cost-effective broadband due to cutting-edge technology
- Unlimited uploads
- No longer a need to worry about fixed line unavailability, cable theft or poor signal strength
- Perfect for home and business users
- 24/7/365 support
- Quick to install, with professional installers on standby around the country

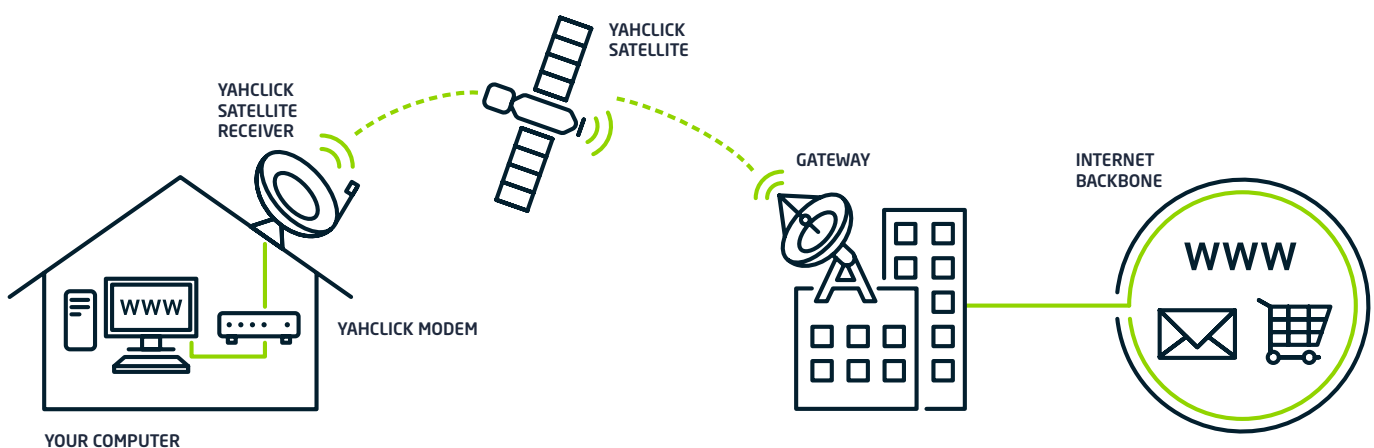

Product overview

YahClick from Vox is a cutting-edge, Ka-band, broadband satellite service that delivers reliable, high-speed internet connectivity to users in areas with limited or no internet access, at costs comparable to current terrestrial services.

YahClick is available in a range of packages that suit any environment and user segment, right from basic internet

access for home users through to high speed service plans for corporate users. It offers unlimited uploads and it's also quick to install, which means that you no longer need to wait weeks for installation or put up with poor signal and cable theft. The need for affordable, reliable connectivity is higher than ever and Vox's YahClick product will ensure that satellite is a viable option for any South African.

How it works

Satellite internet access works just like satellite TV (e.g. DStv) and operates according to the same technology;

namely, a satellite in orbit that communicates with the mini dish outside your home at lightning fast speeds.

Features and benefits

- High speed internet connection almost anywhere in South Africa
- Completely independent of traditional connection mediums such as ADSL and GSM/3G
- Unlimited uploads (not counted as part of the monthly data allowance)
- Unlimited downloads during the Free Zone (01h00 – 06h00) for consumer and business packages
- Additional data can be added and packages adjusted in the user-friendly YahClick customer zone
- Static IP addresses on selected business packages
- Quick installation times

Coverage map

 YahClick Coverage

New technology

YahClick technology is based on something called Ka multi-spot beams, which is a major differentiator to traditional satellite technology. While satellite internet isn't a new technology, cutting-edge "frequency reuse" maximises spectrum efficiency and means that YahClick is perfect for home and business broadband needs. Here is why:

- Ka-band makes use of "spot beams" rather than broadcasting over an entire continent, which results in far more efficient use of the available bandwidth and a lower cost to you.
- Ka-band doesn't require a very large dish outside your home or office to produce high speed internet in either direction (high speed downloads and uploads).
- YahClick is specifically designed around Ka-band technology and acceleration or frequency reuse techniques have been implemented to ensure high-speed performance.

YahClick Go

YahClick Go is a mobile satellite package that offers instant internet connectivity wherever your vehicle is parked. YahClick Go, which is easily mountable on any SUV or trailer, offers access via an auto-pointing antenna and can be operated by a single person. It's great for:

- Media broadcasting
- Military deployments, United Nations and NGO operations
- Emergency and disaster management units, fire and rescue, special operations and security companies
- Government departments such as Home Affairs and the SAPS
- Mining and exploration
- NGOs that require connectivity in remote locations
- Events companies and mobile marketing vehicles and mobile offices
- Financial institutions and ATMs
- Mobile education

Packages and pricing

YahClick has been designed for home users, SMEs/ businesses and large enterprises, with voice and data bundles available. Please refer to the detailed price list for further information.

Cost-effective broadband to due cutting-edge technology

Communications bundle

The YahClick Communications Bundle is the perfect add-on to your high-speed connection. Here's what's included:

- Vox Supafone
- R50 free minutes of talk time every month
- Billion Wi-Fi router
- Hosted Exchange Lite mailbox (email address)
- Faxster Lite fax-to-email service
- Domain registration (.co.za, first year)

Fair Access Policy (FAP)

Home and business packages come with a pre-defined monthly data download limitation that forms part of the YahClick FAP (excludes enterprise packages).

Subscribers are able to use up to 10% of this monthly download allowance at any time during a rolling 72 hour period. Once a subscriber has consumed the 10% download data

allowance allocated to the package during any rolling 72 hour period, the maximum speed will be reduced and subscribers can "top up" by purchasing FAP tokens.

A real-time usage metre is available to all subscribers to monitor consumption. This does not apply to upload speeds, as data uploads are not counted towards overall usage.
