

Managed Wi-Fi for hospitality industry

Secure and seamless Wi-Fi connectivity

VOX aura
hospitality
wi-fi

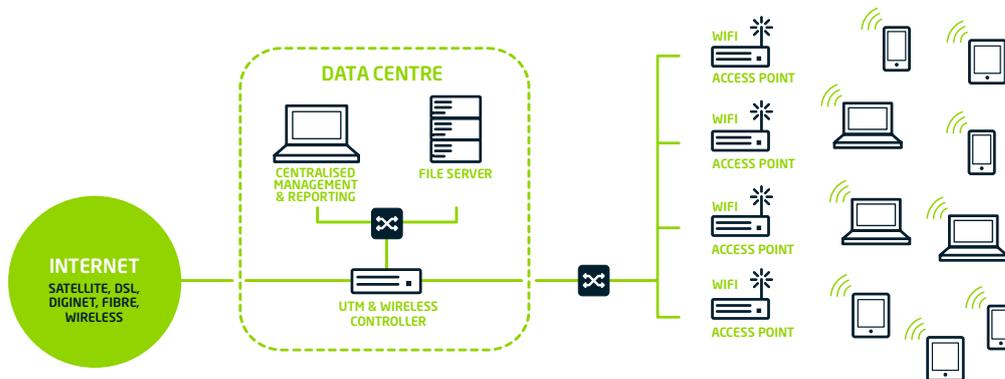

- Fully managed end-to-end Wi-Fi suite for hospitality establishments
- Secure separation between Wi-Fi hotspots and staff access
- Various guest Wi-Fi access options – social media, voucher, payment gateways
- Monitor and manage all users and devices
- Extensive number of concurrent connections

Product overview

Vox Aura Hospitality Wi-Fi allows establishments to offer their guests seamless Wi-Fi connectivity which includes branded captive portals, a variety of billing plans and various promotional and loyalty programmes.

Vox Aura Hospitality provides a cloud-based centralised environment in which to roll out multiple Wi-Fi Access Points (APs). With simple, rapid deployment, a fully managed scoping and implementation process, and centralised control of your Wi-Fi infrastructure, Vox Aura Hospitality brings total control to your wireless environment.

How it works

Features and benefits

Access Points

Multifunctional and affordable 802.11 n/ac wireless APs maximise mobile device performance in medium and high density Wi-Fi environments.

These compact and cost-effective dual-radio APs deliver wireless data rates of up to 867 Mbps to 5-GHz devices with 802.11ac technology leveraging two spatial MIMO streams while

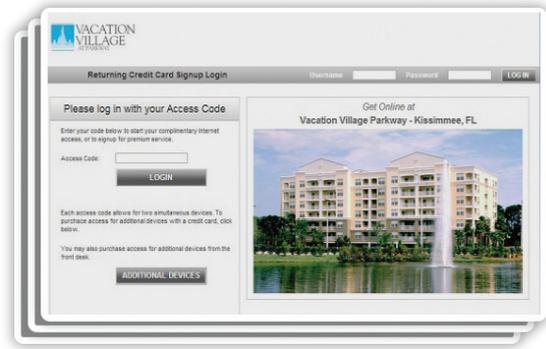

simultaneously supporting 2.4-GHz 802.11n clients with data rates of up to 300 Mbps.

Multiple SSIDs per access point differentiate guest, visitor and staff access thereby securing and protecting sensitive information.

Branded captive portal

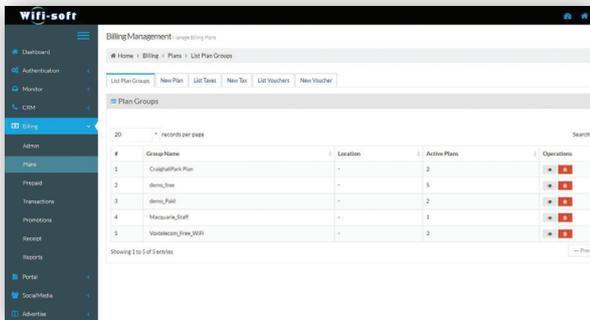

Vox Aura Hospitality provides a wide range of options for designing branded captive portals (splash pages) as per venue requirements. It also provides web templates to design a fully functional captive portal without having to do any programming.

Users are able to login using their social media accounts like Facebook, Twitter, Google+, LinkedIn, etc. and receive event, promotions and updates relevant to their profile.

Hotspot billing

Multiple billing options for hotspot operators to monetise their Wi-Fi setup. These options include credit card billing, PayPal, prepaid/access codes, usage based billing, tiered pricing and many more. Multiple options can be integrated on the captive portal thus providing greater flexibility to the operators for extracting revenue from the customers.

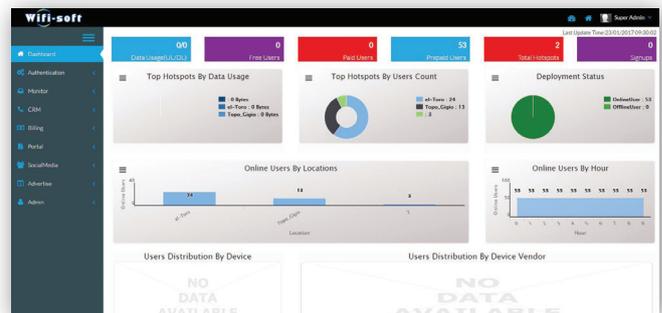

Bandwidth control

Unmanaged networks can lead to chaotic bandwidth usage in which few users will consume most of the bandwidth thus rendering network useless for other users. Vox Aura Hospitality provides effective tools to regulate and track bandwidth usage, allocate bandwidth and implement bandwidth policies to ensure fair allocation to all users on the network.

Reporting

A single interface is provided for reporting and analytics. Network usage, bandwidth utilisation, revenue, and network monitoring form part of the more than 50 reports available.

High availability

Our servers are hosted in a state-of-the-art data centre at Vox. The servers are monitored 24x7 and ensure 99.9% uptime. The data is automatically backed up and replicated across multiple data centres to ensure zero data loss.

About Vox

Innovation and insight combine in Vox, a market leading end-to-end integrated ICT and infrastructure provider and telecommunications company. From data to voice, as well as cloud, business collaboration and conferencing tools, Vox offers

intelligent solutions that connect South Africans to the world, supporting entrepreneurs, customers and commerce, whilst practicing values of integrity, choice and service excellence in all of its dealings. For more information [click here](#).
