- Simplify and reduce email infrastructure and administration overheads
- Available for on premises email environments, as well as Hosted Exchange and Office 365
- Single provider and support contact delivers a seamless service and faster issue resolution

Product overview

Unified Email Management

MimeCast Unified Email Management (UEM) uniquely combines comprehensive email security, continuity and archiving solutions in a single, tightly integrated cloud-based service managed from a central administration console. MimeCast, from Vox, removes the need to deploy, integrate and manage multiple standalone email management solutions. It radically simplifies the notoriously complex world of email management by removing the need to deploy, integrate and manage multiple third party systems – leaving you with a lean, high performance Exchange server to manage.

MimeCast UEM Express

MimeCast UEM Express is the only email management solution to offer fully unified email security and continuity services. It offers complete, seamless integration between security and continuity services, to deliver continuous email security and DLP policy enforcement – even during outages. Customers selecting UEM Express can easily add MimeCast's archiving services to the package in future.

MimeCast UEM Enterprise

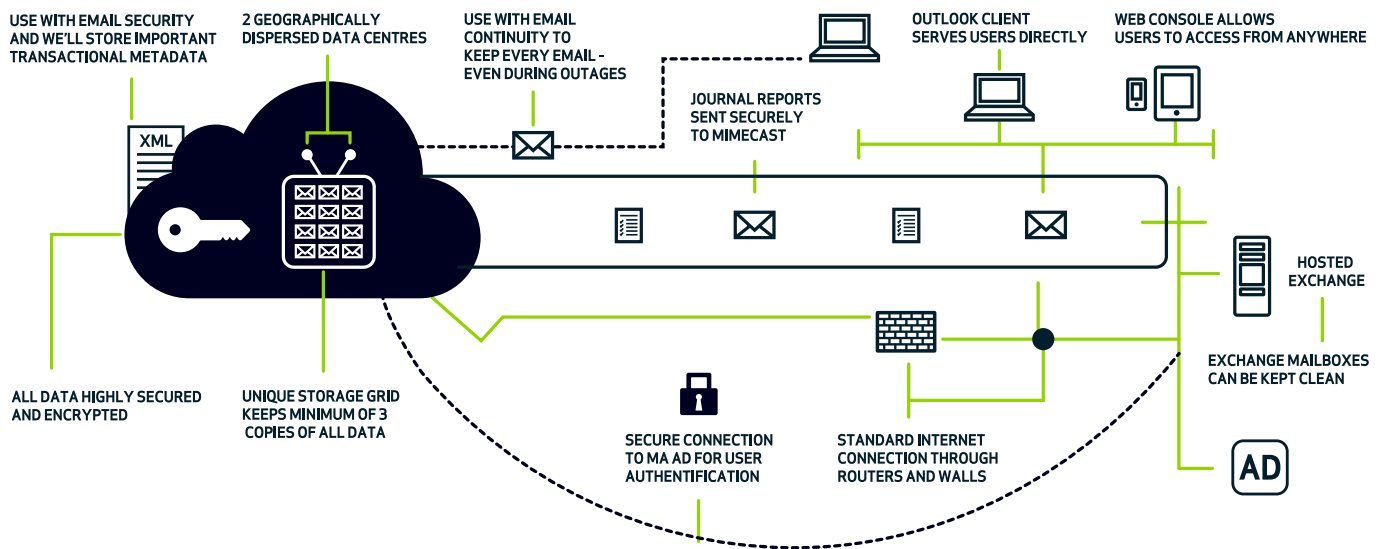

MimeCast UEM Enterprise is the only email management solution to offer fully unified email security, continuity and archiving services. It builds on the UEM Express service, adding powerful archiving to the mix, as well as ensuring that email availability and security are maintained during outages, UEM Enterprise delivers tight integration between:

- Security and continuity:** Unified email security and continuity services ensure that security and DLP policies are consistently enforced – even during outages
- Archiving and security:** In the event of a security breach, this can provide context and help establish whether a data leak was accidental or malicious
- Continuity and archiving:** To ensure that administrators and end-users enjoy uninterrupted access to the entire email archive, even during an outage and from their Mobile Devices (Android, Windows Phone, iPhone and BlackBerry).

How it works

Security

The MimeCast Secure Email Gateway is built on the massively scalable mail transfer agent (MTA), which acts as an email bridgehead in the cloud, delivering multi-layered malware and spam protection that stops both known and emerging threats before they reach your network. It's backed by market-leading SLAs: 100% virus protection, 99% spam protection and 0.0001% spam false positives.

MimeCast email security protects against inbound and outbound email-borne threats. This includes malware, spam,

phishing, DHA and DDoS attacks, deliberate or accidental data leaks, outages, and social engineering attacks.

It also includes real-time, online queue management, end user email digests for personal quarantine management, and advanced email traffic routing capabilities.

MimeCast Content Power Tools complements the MimeCast Secure Email Gateway with data leak prevention, secure message delivery and enhanced stationery

Continuity

Email has become the most critical form of business communication, yet it's not always as reliable as it is important. Businesses can no longer afford outage for any length of time.

MimeCast Email Continuity delivers always-on, seamless email availability through automatic service failover and fallback in near real-time during an email outage. It integrates so seamlessly with Microsoft Outlook that your employees

will just carry on using email safely and securely – whether the email outage is planned or not.

Email Continuity is the only cloud-based solution that steps in automatically to deliver email to end users during planned and unplanned outages of your Microsoft email service. Managed from a single administration console, and with no additional on-premises hardware required, simplifying your network and reducing administration.

Archiving

MimeCast Email Archiving cuts the cost and complexity of secure, accessible email archiving. It gives users instant access to every email they've ever sent or received and it gives you central control of email retention policies.

The cloud-based platform stores all your email – internal and external – in a highly secure and resilient archive, giving you as much space as you need. We charge by the number of users and offer a perpetual storage period, so you get predictable storage costs. We also retain data for all employees past and present.

MimeCast Email Archiving provides secure, reliable email retention and eDiscovery without the need to provision and manage continuously growing email archiving requirements.

Built in redundancy through multiple data centres in each jurisdiction, means we can offer a 100% service availability SLA. MimeCast gives you total confidence in email storage without the need to provision and manage continuously growing email archiving requirements.

**Set budget
limit alerts via
email and SMS**

**Backed by a 100%
service availability SLA**
