

Affordable, superior quality voice

Chrome

A sophisticated IP voice service that delivers high quality voice and saves you money

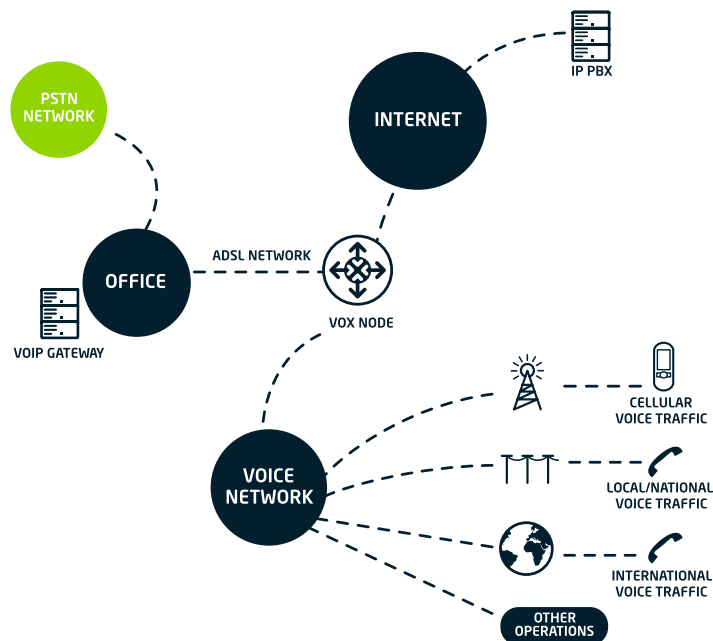

- Affordable, superior quality voice solution
- Designed specifically for SMEs
- Keep your existing telephone numbers
- Extensive reporting
- Designed for ADSL 'last mile'
- Caller Line Identity (CLI)
- Interconnect agreements with all major fixed-line and mobile operators

Product overview

Chrome, from Vox, is a sophisticated voice solution designed specifically for SMEs. Chrome's voice over ADSL IP technology offers competitive rates on cellular, national, international, local inter-branch and inter-community traffic with true per second billing, which translates to significant reductions in your monthly telephony expenditure when compared against the prevailing Telkom tariff plans. Chrome also offers an inbound rebate structure, where you receive a share of the attracted

interconnected fee, derived from routing internal traffic across the Vox network, further reducing your overall telecommunication costs. Vox's interconnect agreements with other major network operators ensure that calls are always routed in the most cost effective way. Chrome operates effectively on ADSL as a last mile connectivity technology. This is a contended service and is perfect for SMEs who can take advantage of minimum monthly link fees to access cost-effective call charges.

How it works

Features and benefits

- Reduced rates (varied savings percentages, compared to current standard Telkom rates)
- Routing of all traffic types (cellular, local, regional, national, international, Vox on-net and inbound)
- The porting of existing Telkom number ranges to the Vox network is project managed in its entirety by the Vox team to ensure a seamless process
- Presentation of CLI
- No GSM bandwidth restrictions
- A revenue share on Chrome inbound calls (as of the prevailing interconnect rate) allows you to use previously inaccessible revenue to off-set infrastructure charges or claim a monthly rebate
- Voice gateways, which are able to connect directly to the PBX's trunk ports or act as a traffic aggregator across PSTN lines
- Chrome also facilitates SIP connectivity directly to compatible PBXs
- Provisioning of international best practice equipment – tested and certified by our PBX partners
- Vox utilises G729a, G711 and G722(HD) codecs

Includes

- **Installation**
Vox will manage the installation of all last mile links
- **Maintenance**
Vox will maintain the Chrome voice installation as well as proactively monitor all equipment and last mile access, ensuring optimal response times
