

State-of-the-art web hosting

Affordable, fully managed web hosting in first-world data centres

web hosting

- A wide range of pre-created applications (e-commerce sites, photo galleries, etc.) that can be installed at the click of a button
- Affordable, first-world website hosting
- Secure hosting in fully protected data centres
- Load balanced web servers to keep you up and running
- Windows and Linux packages supported through a single control panel
- Daily backups and simplified restoration
- Linked to a redundant fibre network so your site is always up
- Easy-to-use, self-service control panel

Product Overview

Vox Telecom offers multiple shared hosting solutions on Microsoft and Linux platforms. The hosting servers are all hosted in Vox Telecom's data centres and have access to our carrier class network. All solutions include unique File Transfer Protocol (FTP) access to website folders, giving you full control over your site. Database administrators are provided with unique passwords. All websites and databases are included on shared daily backups. Our infrastructure is designed to scale up as your business grows. Manage your site, databases and backups all through a single self-service control panel.

Vox Telecom's hosting solution runs on enterprise-class servers that offer load balancing and a cutting-edge clustered environment. All solutions come with a simple-to-use self-service control panel that enables you to easily manage your web content and databases. Daily backups ensure that should the need arise, you are able quickly restore your content, and a wide range of "click and install" apps allow you to install the latest applications (blogs, forums, e-commerce sites, calendars, photo galleries, etc.) at the click of a button.

Features and Benefits

- Click and install app functionality (create blogs, forums, e-commerce sites, calendars, photo galleries, etc. at the click of a button)
- Load-balanced, clustered web servers
- Cross-platform support (Windows and Linux)
- Database management (MySQL and MS-SQL)
- Stats Manager
- Daily backups
- IPS (intrusion prevention system)
- Virus management and updates
- All servers sit behind Vox Telecom's secure firewall infrastructure
- Abundant bandwidth
- Domain name registration, hosting and management
- Servers sit on Vox Telecom's high-speed network (connects directly to Vox Telecom's fibre backbone, ensuring fast response times and quality of service)
- 24/7/365 support

Vox Telecom Limited is a leading telecoms operator, providing voice, data and collaboration services to the southern African market.

State-of-the-art data centres

Vox Telecom offers a robust and reliable hosting service backed by a level of service that supports critical applications. In order to provide a safe and secure hosting environment, Vox Telecom offers the following top of the range facilities:

- **Temperature control**
Air-conditioning systems regulate the temperature of the data centre, ensuring a stable environment ideally suited for optimal processor and switch equipment performance.
- **UPS power management**
Uninterrupted power supplies and a back-up generator support the external power feeds to Vox Telecom's data centres.
- **Fire protection**
Our data centre equipment and support rooms are contained in fire secure enclosures, protected by high-tech smoke detection and fire suppression systems.

- **24/7/365 monitoring**
Includes visitor screening, guarded entry and exit to the data centres and motion-detection for CCTV coverage.
- **Flood detection**
Vox Telecom's data centres are built with no basements, sealed conduits, moisture barriers, dedicated pump rooms, drainage and evacuation systems, and moisture detection sensors.
- **Complete redundancy**
Vox Telecom's data centres are connected to our completely redundant fibre network to ensure your site's always up and running.
