

Tamper Alert

- Internet of Things

Tamper Alert

Connected security that provides improved security uptime, and that can be managed from your smartphone, tablet or PC

- Low-cost and low-energy IoT Tamper Alert applications are infinite
- Receive notifications via push, email or SMS when assets are opened, closed or moved
- Receive notifications from static assets when unusual activities are detected
- Control the quality of security (including light sensors, movement, humidity, temperature, and shock)
- Built on Vox's highly-secure IoT Cloud Network

Product Overview

Vox enables business owners to secure any assets that can open and close, that are static and mobile, as well as ones that change in temperature. If you own any of these, then the Vox Tamper Alert solution is for you.

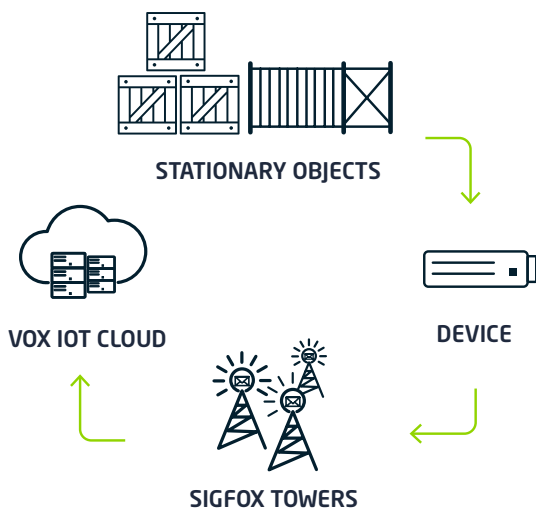

Most security systems are connected with the Global System for Mobile communications (GSM). However, GSM jammers are now widely available on the market, making burglar intrusion easy for almost anyone.

Coming to you at a low cost, while also addressing the main weakness of security on gates, doors, windows and other static but movable objects, our Tamper Alert devices ensure your security systems continue to run normally – even if an intruder attempts to jam its signal.

Even better, Vox Tamper Alert devices aren't limited to theft alone. They also monitor and improve workflow. For example, should your technician be called out to do maintenance on a generator after it reported a temperature change via one of our devices, you can track the asset's door opening and closing, thereby knowing how much time was spent doing the work. Also, any unwanted event can trigger predetermined workflow like a simple SMS or advanced automation.

Power supply is the other 'Achilles' heel' of security systems. Vox IoT-enabled technology tamper alert devices enable low energy consumption: connected movement detectors can run on batteries for months or even years.

Additional Information

Activity Monitor

Long Range

Up to a 7-Year Battery Life

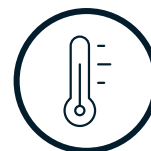

Easy-to-Use

Light Weight

System Reusable

Temperature Control

Agricultural: Farm Gates, Doors, Pumps, Equipment, and Even Tools

Livestock thieves are using modern technology like GSM jammers to break into farms to steal vehicles, livestock and other valuable assets. This peace of mind helps agricultural farmers and the police to work together to apprehend trespassers before they can commit a crime.

Logistics: Fridges and Cold Rooms

Many goods – like medicine and food – must be stored with great care and under specific conditions. Valuable and fragile shipments can't be opened alongside the supply chain. Tamper Alert devices report data like temperature, movement, and tilt, which offer key metrics for quality control and traceability. On top of that, Tamper Alert devices can collect additional data from fridges and cold rooms, offering valuable insights into the value-chain journey.

Features

- Fixed Location
- Activity Monitor
- Plug in & Play
- Lightweight
- Reusable
- Long Range Coverage
- Long Battery Life

Benefits

- Peace of Mind and Security
- Reduced Cost of Losses and Theft
- Optimised Security and Cost Reduction
- Improved Productivity
- Improved Customer Satisfaction
- Clearer Additional Security Measures Along the Logistic Supply Chain

About Vox

Innovation and insight combine in Vox - a market leading end-to-end integrated ICT and infrastructure provider and telecommunications company. From data to voice - as well as Cloud, business collaboration and conferencing tools - Vox offers

intelligent solutions that connect South Africans to the world, supporting entrepreneurs, customers and commerce, whilst practicing values of integrity, choice and service excellence in all of its dealings. For more information [click here](#).
