

Asset Tracking

Asset Tracking - Internet of Things

Track your movable assets with GPS location and geofencing from your smartphone, tablet or PC

- Low-cost and low-energy IoT asset tracking applications are infinite
- Ensure the recovery of lost or stolen assets
- Built on Vox's highly-secure IoT Cloud Network
- Identify the responsibility of assets and localisation off-premises
- Control the quality of delivery (including SLAs, humidity, temperature, and shock)

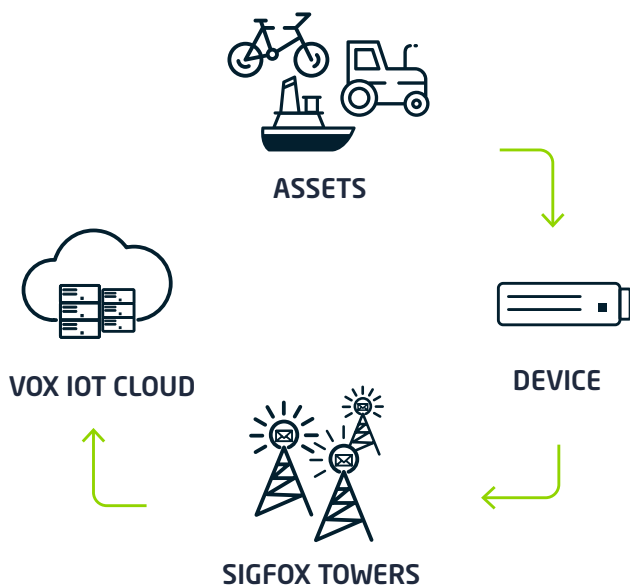

Product Overview

Using connected devices give users a headache when it comes to portability, cost, and usability. When assets are moved from one location to another, you have to face expensive fees when data is sent over a cellular network, and GPS signals are commonly lost when indoors.

Vox has broken the barriers raised by traditional tracking technologies: price, battery life, and coverage. By offering a low-cost and low-power connectivity service over one single global network, Vox brings a whole new set of available uses of tracking technology.

Unlocking the rental market by bringing in integrated workflow, the Vox Asset Tracker allows you to monitor how your assets are being treated, and if your clients are in breach of the rental agreement in any way. Any unwanted event can trigger pre-determined workflow with a simple SMS or an advanced automation.

Additional Information

GPS Location

Activity Monitor

Long Range

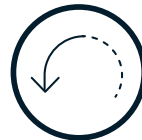

Up to 7-Year Battery Life

Easy-to-Use

Light Weight

System Reusable

Temperature Control

Recovery of Stolen Goods

Vox IoT-enabled devices also include years of battery life. This peace of mind helps insurance companies and the police work together to recover stolen cars, motorcycles, lorries, utility vehicles, and more.

Luggage Management

It's a nightmare losing your luggage during a trip! Simply put a little smart tracker in your bag and you can track the position of your suitcase, your golf clubs, or your kids on your smartphone while traveling.

Rental Management

Thanks to our devices that allow you to set a geofencing feature, you can track everything from bags, golf carts, containers, tractors, tools, equipment – and so much more. The list is endless.

For example, if you rent out a trailer, you can track exactly where it's going and when it's being used which, in turn, alerts you when and if your customer is in breach of their rental contract.

Logistics: Track Your Assets Along the Supply Chain

Many goods – like medicine and food – need to be transported with great care, and under specific conditions, in order to be viable. Valuable and fragile shipments can't withstand any shock alongside the supply chain. Tracking Systems report data like temperature, shock, and tilt – which brings key metrics for quality control and traceability. On top of that, trackers can collect location data from fleets of returnable containers, pellets, parcels and trolleys, offering valuable insights into the value-chain journey.

Features

- GPS Location
- Activity monitor
- Plug in & Play
- Lightweight
- Reusable
- Long Range
- Long Battery Life

Benefits

- Peace of Mind and Security
- Reduced Cost of Losses and Theft
- Optimised Transport Routes and Cost
- Improved Productivity
- Improved Customer Satisfaction
- Clearer Responsibility Boundaries Along the Logistic Supply Chain

About Vox

Innovation and insight combine in Vox - a market leading end-to-end integrated ICT and infrastructure provider and telecommunications company. From data to voice - as well as Cloud, business collaboration and conferencing tools - Vox offers

intelligent solutions that connect South Africans to the world, supporting entrepreneurs, customers and commerce, whilst practicing values of integrity, choice and service excellence in all of its dealings. For more information [click here](#).
