

An excellent high speed alternative to ADSL or fibre

VOX LTE-A

- An attractive option for broadband users
- An affordable option without any fixed line installation
- Fast connectivity for areas with no access to ADSL or fibre
- Next generation network technology offering improved quality and high speeds
- Easy to install

Product overview

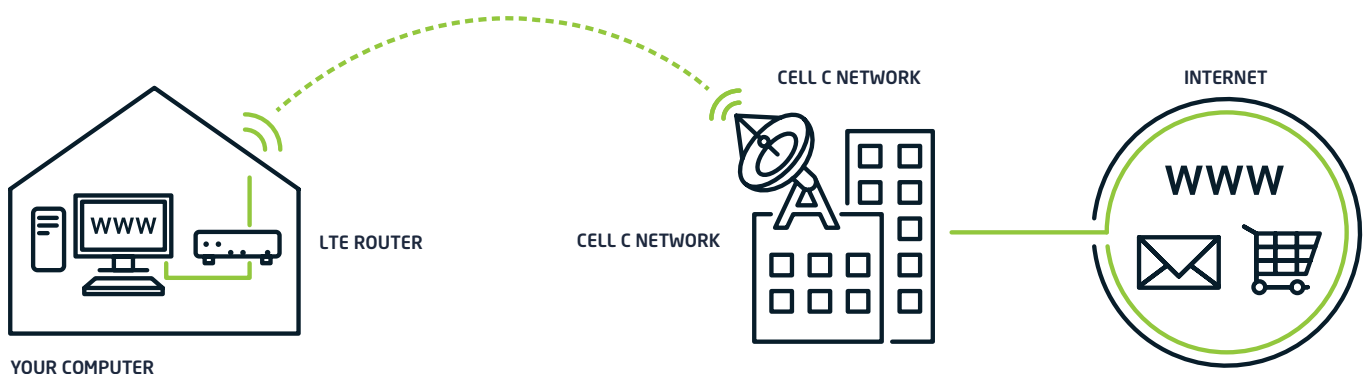

With high speed, top-quality Internet access, Vox LTE-A offers the best connectivity even for the most demanding users and applications.

Growing consumer demands, unique business needs and sophisticated technological advancements, require next generation network coverage. This puts local Internet service providers (ISPs) under constant pressure to offer faster, more reliable connectivity that's still affordable to the consumer.

Wherever there is high-density LTE-A coverage, you have distinct advantages over a wired network like ADSL or fibre, particularly if you're looking to obtain services quickly with minimal disruption during installation. As network coverage improves, LTE-A becomes an increasingly attractive alternative to traditional broadband connectivity.

With fibre-like speeds that are significantly faster than what's available on copper networks, greater quality of service and more consistent coverage, your customers can enjoy the advantages of faster, better and more consistent data transfer rates.

How it works

Features and benefits

- Month to month or 24 month contracts available to suit the customer's budget
- Hard capped and therefore no bill-shock
- Speeds of up to 50Mbps from a best-effort service
- Plug and play installation of the indoor unit
- Monitor usage via Vox Customer Zone
- 'Fixed mobile' data, i.e. A/C powered router is mobile and easily transported for use anywhere in the Rain coverage area
- Only available in the CELLC LTE-A coverage area
- Upgrades or downgrades via Customer Zone are valid from the beginning of the following month
- Top Ups are available via the Customer Zone
- Top-up packages available, valid for 30 days
