All-inclusive, cloud-based IP PBX

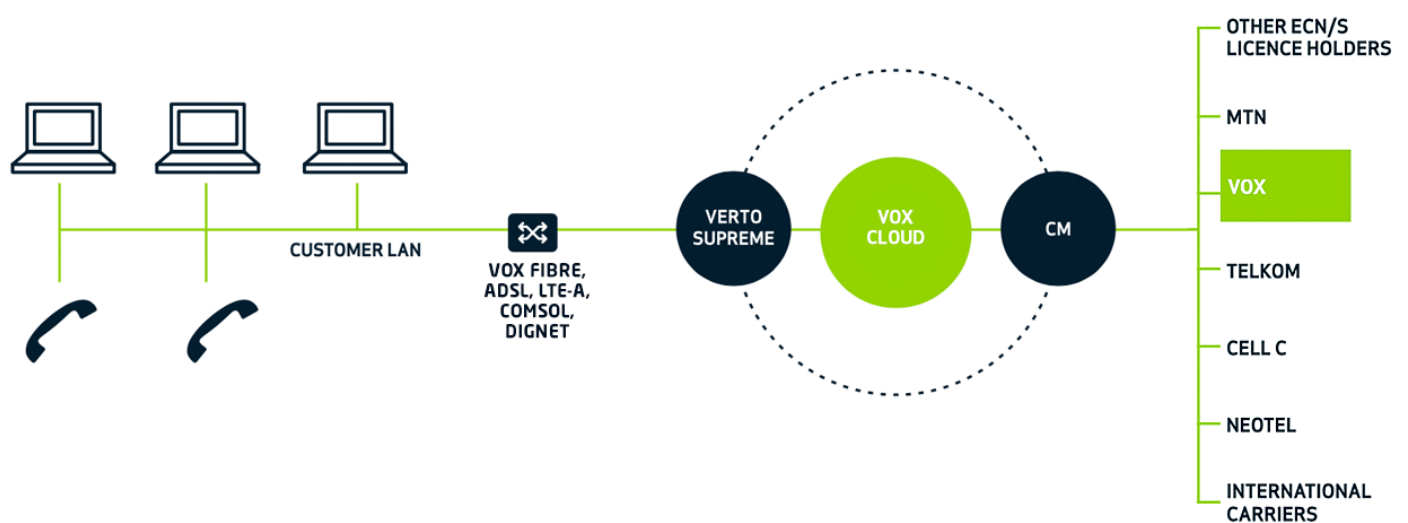

- Full feature set at a single per user price
- Pure IP Centrex solution
- Wide range of features including voicemail, conferencing, music on hold, queuing, etc.
- A Scalable and flexible (pay per user)

Product overview

Verto Supreme is an open-source IP Centrex solution offering PBX features off the same carrier-grade platform that provides our customers with superior voice services. This allows our customers to benefit from the competitive voice rates that Vox can offer via our interconnect agreements as well as a share on inbound revenue once the customer has ported. The Vox network is fully geo-redundant which gives our customers the peace of mind that their PBX services will not be compromised.

Vox offers Verto Supreme as a fully managed IP telephony solution to the SME market, which can be deployed over numerous Vox last mile access types, such as Vox fibre, Vox ADSL, Vox Chrome Air, Vox wireless or Diginet services. The minimal capital investment ensures our customers have a solution that is cost effective, simple to deploy and feature rich.

How it works

Visit us at vox.co.za

What it includes

Self-service manageability

Verto Supreme and the Vox voice platform deliver the most cost effective call rates in conjunction with leading IPT technology. The resulting benefit is that in many instances, the call savings offsets the cost of the Verto Supreme monthly rental/fixed costs. Verto Supreme is supported by the Communications Manager hosted TMS platform and offers a comprehensive telephony expense management system that allows for multiple telephony devices to be associated with users, draw multi-level and multi-functional reports and combines with external telephony vendor analysis. This service is delivered via a web interfaces.

LAN readiness assessment

Verto Supreme includes a service which analyses the LAN environment to assess its ability to support a quality VOIP service. This service extends to the assessment of reticulation and switches and can be extended to the WAN environment as well as an overall ICT health check (any LAN equipment required will be quoted separately).

Customer premises equipment and redundancy

Verto Supreme requires no on-site voice gateways for redundancy. As this is a full IP Centrex PBX, failover or redundancy can be provided in the form of a secondary last mile data link and not to PSTN lines.

Self-service manageability

A site administrator has the ability to apply moves and changes to their site as and when required which negates the necessity for costly call out charges. Users have the ability to change telephone behavior on an adhoc basis. Such changes will include follow-me, call forwarding, voicemail set-up and retrieval.

Features and benefits

- Based on a per user model
- National footprint for installation and support
- Administrator and user self-service portal available
- PBX features such as voicemail, conferencing, music on hold, automated attendant and automatic call distribution included as a standard with access to a wide range of features
