

# Winning at Business

Need Internet access for your business, but don't have Fibre coverage? Choose Vox Business DSL as a temporary solution until Fibre is available

## Business DSL

- Uncapped solutions available
- DSL router included
- Unshaped, high-speed DSL with speeds ranging from 5-40Mbps
- 24/7 support available 365 days
- National sales and support footprint
- Self management portal included

## Product Overview

### Business DSL

Business DSL is built for small to medium sized businesses that require unshaped and high-speed internet connectivity. Vox's BDSL solution offers fully managed hardware, which consists of a DSL router, a provisioning router and uncapped data on a static IP. Customers have the option to purchase their DSL packages with or without DSL lines and can purchase an additional static IP.

Forward thinking Business

## Features and Benefits

Feature:	Benefit:
Business Priority, Uncapped, Unshaped Connectivity	Receive fast Internet access at all times as traffic is not prioritised in a specific order. Added to the DSL package is an uncapped data bundle.
Secure Online Management Portal	Have full control of your DSL accounts via the Vox Customer Zone to upgrade or downgrade with ease, monitor usage, get usage notifications and manage data accounts.
Static IP Addresses	An additional /30 IP Address can be purchased per BDSL package. This gives you a single static IP which provides usable addresses that can be used for hosting, remote access and VoIP services.
Works When You Work	Business DSL is optimised for usage during peak business hours, and to minimise waste during downtime. Ensures that businesses don't compete with consumer downloads.
Fully-Managed DSL Router	Vox provisions, configures, monitors and manages your router to enable your business to focus on what matters.
Provisioning Router	Easy migration paths when upgrading from BDSL to FTTB (Fibre to the Business). The same provisioning router can be used when upgrading to FTTB.

\*Fair Use Policy (FUP) Applicable: FUP enables other BDSL users to access the network fairly. FUP will be implemented for businesses who use more data in a specific timeframe.
