How To:

Set Up your Domain Email in Gmail _for Mac

Contents

Introduction	2
Setting Up Your Domain Email	3

Introduction

Your domain email address can be accessed using any mail program, including Gmail.

The advantages of using Gmail are:

- The interface may be familiar to you if you are already using it
- Your email can be accessed from any online computer or device
- You receive 15 Gb of storage per mailbox, which is useful if you want to store a large amount of mail without incurring disk over-usage charges.

Setting Up Your Domain Email

Note that you will need access to your Gmail address (example@gmail.com) to verify the setup of your new domain email address.

- 1. Browse to Gmail and log in.
- 2. Select the Settings icon from the top right menu, then choose **Settings** from the dropdown list

Gmail will automatically add certain settings, but it is advisable to check the following:

- That the user name is the full email address
- The password is included
- That the POP server has the prefix "mail." before your domain name
- Other settings may be checked according to your personal preference

7. Select Add Account.

• •		Gmail - Add a mail account

		Leave a copy of retrieved message on the server. Learn more
		Always use a secure connection (SSL) when retrieving mail.
		Label incoming messages: john@example.com 📀
		Archive incoming messages (Skip the Inbox)
		Cancel « Back Add Account »

Your account has now been set up to receive your domain email.

You can now continue to set up the account to send mail from your domain.

8. Select the "Yes" option, and then click Next.

9. Untick the "Treat as an alias" check box, and click the Next Step button.

😑 😑 🗧 Gmail - Add another email address you own

Enter information about your other email address. (your name and email address will be shown on mail you send)
Name: John Smith
Email address: john@example.com
Treat as an alias. Learn more
Specify a different "reply-to" address (optional)
Cancel Next Step »

If you want to send mail through your SMTP server, select the second option.

Why do I need to do this?

Gmail's default setting is to use the Gmail SMTP servers to send mail. This works, but is not recommended, because Gmail servers are more likely to be blacklisted for spam abuse, and certain mail servers will not receive mail from domains that are not associated with the particular server. It is therefore recommended that you set up your SMTP server.

Gmail - Add another email address you own
