The Vox **Streaming Relay Server**

Go from **good** to **great** in an **instant!**

Thanks to Vox Fibre, streamers new and old can benefit from our dedicated Gaming streaming server environment.

Do you **stream** your video and gaming content to **Twitch, YouTube or Vimeo?**

If you're a Vox FTTH (Fibre to the Home) customer, you'll automatically enjoy the benefits of our dedicated streaming relay server – **for free!**
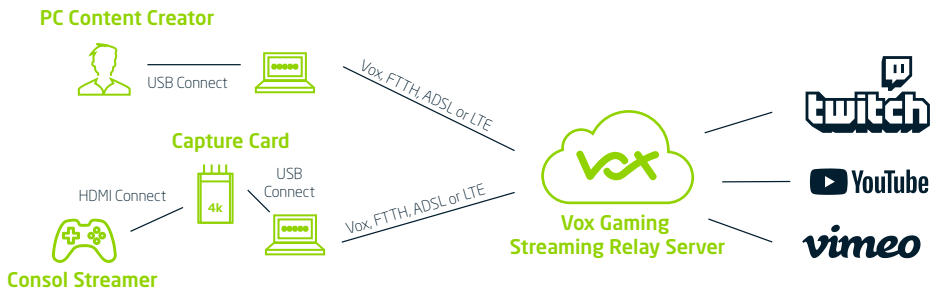

In the past, streamers have had to settle for less than Standard Definition streams, with High Definition streams being a pipe-dream, as a result of ISP infrastructure and delays.

Vox has made streaming your game as well as other feeds and building your subscriber base, effortless by implementing a service that not only improves your streaming capabilities, but your streaming quality too.

Thanks to our dedicated streaming relay service and carrier backbone, we can now ensure up to 1080p uninterrupted streams to deliver your content on the following platforms:
- Twitch
- YouTube
- Vimeo

Vox, FTTH, ADSL or LTE

Vox Gaming Streaming Relay Server

twitch

YouTube

vimeo

If you're streaming from a PC, all you have to do is point your stream to the following URLS:
- **Twitch:** rtmp://stream.vox.co.za/twitch
- **YouTube:** rtmp://stream.vox.co.za/youtube
- **Vimeo:** rtmp://stream.vox.co.za/vimeo

If you're streaming via a console, you will need a capture card, HDMI and USB cables to connect to your PC, from which you can then stream to the Vox RTMP Streaming relay server.

Gone are the days of battling to barely **stream** video or **content at 480p** out to your subscribers!
