

Next-generation, high speed alternative to Fibre or DSL

MTN Fixed LTE-A

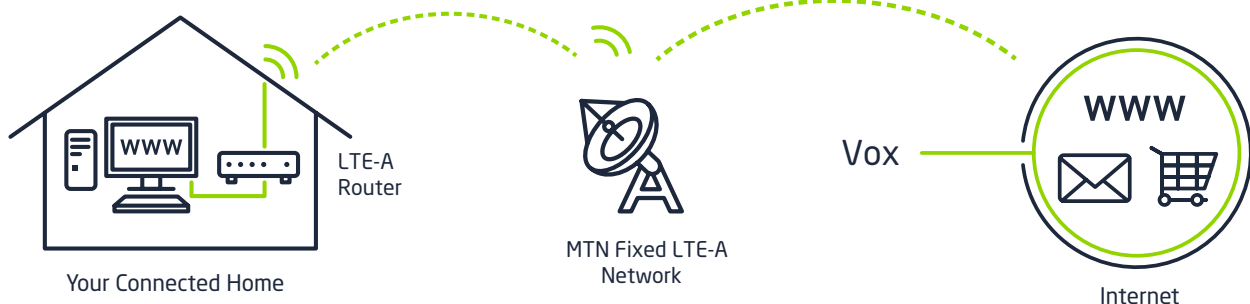

Quick to install connectivity providing a fast, reliable Internet experience.

- Fast connectivity for areas with no access to ADSL or Fibre
- An affordable option without any fixed line installation
- An attractive option for broadband users
- Build your own service depending on your Internet needs
- Next generation network technology offering improved quality and high speeds
- Monitor usage and keep connected using the Customer Zone

Product Overview

With high-speed, top-quality Internet access, Fixed LTE-A offers the best connectivity even for the most demanding users and applications. Where Fibre networks might take weeks or months to roll out and to install, Fixed LTE-A is a rapid order-to-installation product. Wherever there is high-density Fixed LTE-A coverage the time to deliver quality Internet access is now 7-10 days!

As national network coverage grows, Fixed LTE-A becomes an increasingly attractive alternative to traditional broadband connectivity. Fixed LTE-A offers Fibre-like speeds that are significantly faster than what's available on copper networks. Customise your service to suit your Internet needs.
